                                                                                                                                                                                                                                                                                                                                                                                                                         The present invention describes a method for treating a subject for a condition mediated by ectaxin comprising generating an active immune response in the subject to ectaxin. Also described: (1) an immunogenic composition (C) comprising ectaxin or its peptide fragment coupled to an immunogenic protein carrier; (2) producing (C); and (3) a pharmaceutical formulation for use as a vaccine comprising (C) and an adjuvant and a vehicle. (C) has antiasthmatic and antiallergic activities, and can be used in vaccines. The method is useful for treating a subject for a condition mediated by cotaxin, e.g. asthma, allergy or allergic disease. The present sequence represents a human ectaxin epitope and spacer aminogenic expresence, which is used in the exemplification of the present
                                                                                                                                                                                                                                                                                                                                   Treating a subject for a condition mediated by eotaxin, e.g. asthma, allergy or allergic disease by generating an active immune response in

condition mediated by cotaxin comprising generating an active immune response in the subject to cotaxin. Also described: (1) an immunogenic composation (C) comprising cotaxin or its peptide fragment coupled to an immunogenic protein carrier; (2) producing (C); and (3) a pharmaceutical formulation for use as a vaccine comprising (C) and an adjuvant and a vehicle. (C) has antiasthmatic and antiallargic activities, and can be used in vaccines. The method is useful for treating a subject for a condition mediated by cotaxin, e.g. asthma, allergy or allergic disease. The present sequence represents a human cotaxin epitope and spacer amino acid sequence, which is used in the exemplification of the present
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Treating a subject for a condition mediated by eotaxin, e.g. asthma, allergy or allergic disease by generating an active immune response in the subject to eotaxin.
                                                                                                                       Treating a subject for a condition mediated by eotaxin, e.g. asthma, allergy or allergic disease by generating an active immune response in the subject to eotaxin.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               eotaxin; immune response; immunogenic; antiasthmatic; antiallergic; vaccine; asthma; allergy; allergic disease; human; spacer; epitope.
                                                                                                                                                                                                                          The present invention describes a method for treating a subject
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                    100.0%; Score 45; DB 7; Length 17; 100.0%; Pred. condition mediated by ectaxin comprising generating an active immune response in the subject to ectaxin. Also described: (1) an immunogenic composition (C) comprising ectaxin. Also described: (1) an immunogenic composition (C) comprising ectaxin or its peptide fragment coupled to an immunogenic protein carrier; (2) producing (C); and (3) a plarmaceutical formulation for use as a vaccine comprising (C) and an adjuvant and a used in vaccines. The method is useful for treating a subject for a condition mediated by ectaxin, e.g. asthma, allergy or allergic disease. The present sequence represents a human ectaxin epitope and spacer amino acid sequence, which is used in the exemplification of the present invention.
                                   condition mediated by eotaxin comprising generating an active immune response in the subject to eotaxin. Also described: (1) an immunogenic composition (C) comprising eotaxin or its peptide fragment coupled to an immunogenic protein carrier; (2) producing (C); and (3) a pharmaceutical formulation for use as a vaccine comprising (C) and an adjuvant and a vehicle. (C) has antiasthmatic and antiallergic activities, and can be used in vaccines. The method is useful for treating a subject for a condition mediated by eotaxin, e.g. asthma, allergy or allergic disease. The present sequence represents a human eotaxin epitope and spacer amino acid sequence, which is used in the exemplification of the present

(1) comprises several liposomal vesicles compirating a high weight ratio of a lipid to an encapsulated water-soluble substance so as to achieve a high efficiency of encapsulation. The immunomimic peptide is chosen from efficiency of encapsulation. The immunomimic peptide is chosen from ph889219, gonadotropin releasing hormone (GnRH) peptide (ADH89210 and ADH89224), and human chorionic gonadotropin (hCG) peptide (ADH89221 or hormone cognate receptors, where the vaccines directed against hormone or hormoninic peptide such as gastrin G-17 or G-34 is useful for treating gastrointestinal malignancy, and non-gastrointestinal tumors
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             /note= "This residue is covalently linked to the carrier molecule Diphtheria toxoid (DT) through the sulfhydryl group on this residue by reacting with heterobifunctional linker molecule to the epsilon-amino groups of the lysine
                                                                                                                                                                                                                                                                                                                                                                   Cytostatic; Contraceptive; Vaccine; immunomimic peptide; gastrin G-17; gastrin G-34; gonadotropin releasing hormone; GRNH; chorionic gonadotropin; hCG; hormone; gastrointestinal malignancy; thyroid cancer; lung cancer; reproductive system cancer.

This invention relates to a novel method of treating a subject for an inflammatory condition which results from eosinophil accumulation which comprises generating an active immune response in the parient comprising automatibodies to ectaxin and interleukin (IL)-5 (or IL-4, IL-9 and IL-13). The invention may be useful for the development of compounds with an antiniflammatory, antisathmatic or antiallergic activity or for the production of a vaccine. The composition and methods are useful for preventing or treating inflammatory conditions resulting from eosinophil accumulation, such as asthma, allergy or allergic diseases. The present sequence is that of a modified (cysteine residues substituted by threonine) peptide fragment derived from human eotaxin which may be used within the method of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Treating inflammatory conditions resulting from eosinophil accumulation (e.g. asthma, allergy or allergic disease) comprises generating an active immune response against eotaxin and interleukin-5.
                                                                                                                                                                                                                                                                           inflammatory condition; eosinophil accumulation; immune response; autoantibody; eotaxin; interleukin; IL-5; IL-4; IL-9; IL-13; antiinflammatory; antiasthmatic; antiallergic; vaccine; asthma; allergy; allergic disease; human.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            DB 8; Length 17;

                                                                                                                                                                                                     ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    This invention relates to a novel method of treating a subject for an inflammatory condition which results from eosinophil accumulation which comprises generating an active immune response in the patient comprising autoantibodies to ectaxin and interleukin (IL)-5 (or IL-4, IL-9 and IL-13). The invention may be useful for the development of compounds with an antinflammatory, antiasthmatic or antiallergic activity or for the production of a vaccine. The composition and methods are useful for preventing or treating inflammatory conditions resulting from eosinophil secumilation, such as asthma, allergy or allergic diseases. The present sequence is that of a peptide fragment derived from human eotaxin which may be used within the method of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Treating inflammatory conditions resulting from eosinophil accumulation (e.g. asthma, allergy or allergic disease) comprises generating an active immune response against eotaxin and interleukin-5.
such as thyroid and lung cancer; or GnRH or hCG immunomimic peptide is bestil as contraceptive and for treating cancers in male and female reproductive systems. The present sequence comprises a G17 peptide linked to a spacer peptide at the C-terminal end.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         inflammatory condition; eosinophil accumulation; immune response; autoantibody; eotaxin; interleukin; IL-5; IL-4; IL-9; IL-13; antifilammatory; antiathmatic; antiallergic; vaccine; asthma; allergy; allergyc disease; human.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Gaps

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ö
                                                                                                                                                                                                                                                                                                                                              This invention relates to a novel method of treating a subject for an inflammatory condition which results from eosinophil accumulation which comprises generating an active immune response in the parient comprising autoantibodies to ectaxin and interleukin (IL)-5 (or IL-4, IL-9 and IL-13). The invention may be useful for the development of compounds with an antiinflammatory, antiasthmatic or antiallergic activity or for the production of a vaccine. The composition and methods are useful for preventing or treating inflammatory conditions resulting from eosinophil accumulation, such as asthma, allergy or allergic diseases. The present sequence is that of a modified (cysteine residues substituted by threonine) peptide fragment derived from human eotaxin which may be used within the method of the invention.
                                                                                                                                                                                                                                                                            Treating inflammatory conditions resulting from eosinophil accumulation (e.g. asthma, allergy or allergic disease) comprises generating an active immune response against eotaxin and interleukin-5.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               This invention relates to a novel method of treating a subject for an inflammatory condition which results from eosinophil accumulation which comprises generating an active immune response in the patient comprising autoantibodies to ectaxin and interleukin (IL)-5 (or IL-4, IL-9 and IL-13). The invention may be useful for the development of compounds with an antiinflammatory, antiasthmatic or antiallergic activity or for the production of a vaccine. The composition and methods are useful for preventing or treating inflammatory conditions resulting from eosinophil accumulation, such as asthma, allergy or allergic diseases. The present sequence is that of a modified (cysteine residues substituted by threonine) peptide fragment derived from human eotaxin which may be used within the method of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                  Treating inflammatory conditions resulting from eosinophil accumulation (e.g. asthma, allergy or allergic disease) comprises generating an active immune response against eotaxin and interleukin-5.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       inflammatory condition; eosinophil accumulation; immune response; autoantibody; eotaxin; interleukin; IL-5; IL-4; IL-9; IL-13; antiinflammatory; antiasthmatic; antiallergic; vaccine; asthma; allergy; allergic disease; human.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    .

                                                                                                                               This invention relates to a novel method of treating a subject for an inflammatory condition which results from eosinophil accumulation which comprises generating an active immune response in the patient comprising autoantibodies to ectaxin and interleukin (IL)-5 (or IL-4, IL-9 and IL-13). The invention may be useful for the development of compounds with an antinflammatory, antiasthmatic or antiallergic activity or for the production of a vaccine. The composition and methods are useful for preventing or treating inflammatory conditions resulting from eosinophil secumination, such as asthma, allergy or allergic diseases. The present sequence is that of a peptide fragment derived from human ectaxin which may be used within the method of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               This invention relates to a novel method of treating a subject for an inflammatory condition which results from eosinophil accumulation which comprises generating an active immune response in the patient comprising autoantibodies to eotaxin and interleukin ({\rm IL})-5 (or {\rm IL}-4, {\rm IL}-9 and {\rm IL}-13). The invention may be useful for the development of compounds with an antiinflammatory, antiasthmatic or antiallergic activity or for the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Treating inflammatory conditions resulting from eosinophil accumulation (e.g. asthma, allergy or allergic disease) comprises generating an active immune response against eotaxin and interleukin-5.
                Treating inflammatory conditions resulting from eosinophil accumulation (e.g. asthma, allergy or allergic disease) comprises generating an active immune response against eotaxin and interleukin-5.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          inflammatory condition; eosinophil accumulation; immune response; autoantibody; eotaxin; interleukin; IL-5; IL-4; IL-9; IL-13; antianflammatory; antiasthmatic; antiallergic; vaccine; asthma; allergy; allergic disease; human.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          This invention relates to a novel method of treating a subject for an inflammatory condition which results from eosinophil accumulation which comprises generating an active immus response in the patient comprising autoantibodies to ectaxin and interleukin (IL)-5 (or IL-4, IL-9 and IL-13). The invention may be useful for the development of compounds with an antiniflammatory, antiasthmatic or antiallergic activity or for the production of a vaccine. The composition and methods are useful for preventing or treating inflammatory conditions resulting from eosinophil accumulation, such as asthma, allergy or allergic diseases. The present sequence is that of a modified (cysteine residues substituted by threonine) peptide fragment derived from human IL-5 which may be used within the method of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Treating inflammatory conditions resulting from eosinophil accumulation (e.g. asthma, allergy or allergic disease) comprises generating an active immune response against eotaxin and interleukin-5.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  inflammatory condition; eosinophil accumulation; immune response; autoantibody; eotaxin; interleukin; IL-5; IL-4; IL-9; IL-13; antinflammatory; antiasthmatic; antiallergic; vaccine; asthma; allergy; allergic disease; human.
production of a vaccine. The composition and methods are useful for preventing or treating inflammatory conditions resulting from eosinophil secumulation, such as asthma, allergy or allergic diseases. The present sequence is that of a peptide fragment derived from human eotaxin which may be used within the method of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Gaps

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            This invention relates to a novel immunogen that comprises a gastrin receptor peptide epitope (GRB) - formally designated as GRP - conjugated to an immunogenic carrier for the treatment of gastrin-dependent tumours. Specifically, it refers to immunogens (immunostimulators) capable of inducing antibodies in vivo that can bind to gastrin receptors and as such prevent binding of growth stimulating peptide hormones, which in turn can be used to prevent or treat gastrin stimulated malignant or premalignant growth. The present invention describes the active or passive immunisation of a patient with a CCK-B/gastrin receptor immunogen or antibody thereof that are specific to the tumour and can be used to arrest tumour growth. As such, the method is useful for diagnosing the gastrin receptor in a biopsy, which involves obtaining a biopsy specimen from a patient, exposing the specimen to antibodies conjugated to detectable molecules, and hence detecting the amount of bound antibody by colorimetric, chemiluminescent, fluorescent, radiometric or scintigraphic techniques. This peptide sequence is a human CCK-B/ gastrin receptor in a synthetic spacer used to project the peptide with a synthetic spacer used to project the peptide carrier, in order to enhance binding to the lymphocyte receptors, given in an exemplification of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Novel immunogen comprising gastrin receptor-peptide epitope conjugated at its cysteine end to immunogenic carrier, useful for treating patient suffering from gastrin responsive tumor.

                                                                                               receptor peptide epitope (GRE) - formally designated as GRP - conjugated to an immunogenic carrier for the treatment of gastrin-dependent tumours specifically, it refers to immunogens (immunostimulators) capable of inducing antibodies in vivo that can bind to gastrin receptors and as such prevent binding of growth stimulating peptide hormones, which in turn can be used to prevent or treat gastrin stimulated malignant or premalignant growth. The present invention describes the active or passive immunisation of a patient with a CCK-B/gastrin receptor immunogen or antibody thereof that are specific to the tumour and can be used to arrest tumour growth. As such, the method is useful for diagnosing the gastrin receptor in a biopsy, which involves obtaining a biopsy specimen detectable molecules, and hence detecting the amount of bound antibody by colorimetric, chemiluminescent, fluorescent, radiometric or scintigraphic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           COLOLIMENTAL.

This peptide sequence is a human CCK-B/ gastrin receptor immunomimic peptide sequence spacer used to project the peptide mountains a synthetic spacer used to project the peptide mountain neview in order to enhance binding to the

The present invention describes a method for treating a subject for a condition mediated by eotaxin comprising generating an active immune response in the subject to eotaxin. Also described: (1) an immunocentic composition (C) comprising eotaxin or its peptide fragment coupled to an immunogenic protein carrier; (2) producing (C); and (3) a pharmaceutical formulation for use as a vaccine comprising (C) and an adjuvant and a vehicle. (C) has antiasthmatic and antiallergic activities, and can be used in vaccines. The method is useful for treating a subject for a condition mediated by cotaxin, e.g. asthma, allergy or allergic disease. The present sequence represents a human eotaxin epitope and spacer amino acid sequence, which is used in the exemplification of the present
                                                                                                                                                                                                                                                                      Treating a subject for a condition mediated by eotaxin, e.g. asthma, allergy or allergic disease by generating an active immune response in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            eotaxin; immune response; immunogenic; antiasthmatic; antiallergic; vaccine; asthma; allergy; allergic disease; human; spacer; epitope.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The present invention describes a method for treating a subject for a condition mediated by ectaxin comprising generating an active immune response in the subject to ectaxin. Also described: (1) an immunogenic composition (C) comprising octaxin or its peptide fragment coupled to an immunogenic protein carrier; (2) producing (C); and (3) a pharmaceutical formulation for use as a vaccine comprising (C) and an adjuvant and a vehicle. (C) has antiaethmatic and antiallergic activities, and can be used in vaccines. The method is useful for treating a subject for a condition mediated by cotaxin, e.g. asthma, allergy or allergic disease. The present sequence represents a human ectaxin epitope and spacer amino acid sequence, which is used in the exemplification of the present
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Treating a subject for a condition mediated by eotaxin, e.g. asthma, allergy or allergic disease by generating an active immune response in the subject to eotaxin.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              eotaxin; immune response; immunogenic; antiasthmatic; antiallergic; vaccine; asthma; allergy; allergic disease; human; spacer; epitope.

                                                                                                                       condition mediated by eotaxin comprising generating an active immune response in the subject to eotaxin. Also described: (1) an immunogenic composition (C) comprising eotaxin or its peptide fragment coupled to an immunogenic protein carrier; (2) producing (C); and (3) a pharmaceutical formulation for use as a vaccine comprising (C) and an adjuvant and a vehicle. (C) has antiasthmatic and antiallergic activities, and can be used in vaccines. The method is useful for treating a subject for a condition mediated by eotaxin, e.g. asthma, allergy or allergic disease. The present sequence represents a human eotaxin epitope and spacer amino acid sequence, which is used in the exemplification of the present
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 This invention relates to a novel method of treating a subject for an hillammatory condition which results from eosinophil accumulation which comprises generating an active immune response in the patient comprising automatibodies to eotaxin and interleukin (II)-5 (or IL-4, IL-9 and IL-
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 inflammatory condition; eosinophil accumulation; immune response; autoantibody; eotaxin; interleukin; IL-5; IL-4; IL-9; IL-13; antianflammatory; antiasthmatic; antiallergic; vaccine; asthma; allergy; altergic disease; human; spacer peptide.

The invention may be useful for the development of compounds with an antiinflammatory, antiasthmatic or antiallergic activity or for the production of a vaccine. The composition and methods are useful for preventing or treating inflammatory conditions resulting from eosinophil secumilation, such as sathma, allergy or allergic diseases. The present sequence is that of a peptide, derived from human eotaxin linked to a spacer peptide, which may be used within the method of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Treating inflammatory conditions resulting from eosinophil accumulation (e.g. asthma, allergy or allergic disease) comprises generating an active immune response against eotaxin and interleukin-5.
 an
             antiniflammatory, antiasthmatic or antiallergic activity or for the production of a vaccine. The composition and methods are useful for preventing or treating inflammatory conditions resulting from eosinophil accumulation, such as asthma, allergy or allergic diseases. The present sequence is that of a peptide, derived from human cotaxin linked to a spacer peptide, which may be used within the method of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   inflammatory condition; eosinophil accumulation; immune response; autoantibody; eotaxin; interleukin; IL-5; IL-4; IL-9; IL-13; antiinflammatory; antiasthmatic; antiallergic; vaccine; asthma; allergy; allergic disease; human; spacer peptide.

The present invention describes a method for treating a subject for a condition mediated by eotaxin comprising generating an active immune response in the subject to eotaxin. Also described: (1) an immunocention (C) comprising eotaxin or its peptide fragment coupled to an immunogenic protein carrier; (2) producing (C); and (3) a pharmaceutical formulation for use as a vaccine comprising (C) and an adjuvant and a vehicle. (C) has antiasthmatic an antiallergic activities, and can be used in vaccines. The method is useful for treating a subject for a condition mediated by cotaxin, e.g. asthma, allergy or allergic disease. The present sequence represents a human ectaxin epitope and spacer amino acid sequence, which is used in the exemplification of the present
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Treating a subject for a condition mediated by ectaxin, e.g. asthma, allergy or allergic disease by generating an active immune response in the subject to ectaxin.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               eotaxin; immune response; immunogenic; antiasthmatic; antiallergic; vaccine; asthma; allergy; allergic disease; human; spacer; epitope.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          This invention relates to a novel method of treating a subject for an inflammatory condition which results from eosinophil accumulation which comprises generating an active immune response in the patient comprising autoantibodies to ectaxin and interleukin [IL]-5 (or IL-4, IL-9 and IL-13). The invention may be useful for the development of compounds with an antinflammatory, antiasthmatic or antiallergic activity or for the production of a vaccine. The composition and methods are useful for preventing or treating inflammatory conditions resulting from eosinophil secumilation, such as asthma, allergy or allergic diseases. The present sequence is that of a peptide, derived from human eotaxin linked to a spaces peptide, which may be used within the method of the invention.

                                                                                                                                                                                                The present invention describes a method for treating a subject for a condition mediated by ectaxin comprising generating an active immune response in the subject to ectaxin. Also described: (1) an immunogenic composition (C) comprising ectaxin or its peptide fragment coupled to an immunogenic protein carrier; (2) producing (C); and (3) a pharmaceutical formulation for use as a vaccine comprising (C) and an adjuvant and a vehicle. (C) has antiasthmatic and antiallergic activities, and can be used in vaccines. The method is useful for treating a subject for a condition mediated by cotaxin, e.g. asthma, allergy or allergic disease. The present sequence represents a human ectaxin epitope and spacer amino acid sequence, which is used in the exemplification of the present

This invention relates to a novel immunogen that comprises a gastrin receptor peptide epitope (GRE) - formally designated as GRP - conjugated to an immunogent carrier for the treatment of gastrin-dependent tumours. Specifically, it refers to immunogens (immunostimulators) capable of inducing antibodies in vivo that can bind to gastrin receptors and as such prevent binding of growth stimulating peptide hormones, which in turn can be used to prevent or treat gastrin stimulated malignant or premalignant growth. The present invention describes the active or passive immunisation of a patient with a CCK-S/gastrin receptor immunogen or arrest tumour growth. As such, the method is useful for diagnosing the gastrin receptor in a biopsy, which involves obtaining a biopsy specimen contained and patient, exposing the specimen to antibodies conjugated to detectable molecules, and hence detecting the amount of bound antibody by colorimetric, chemiluminescent, fluorescent, radiometric or scintigraphic immunominic peptide with a synthetic spacer used to project the peptide way from the protein carrier, in an exemplification of the invention.
Novel immunogen comprising gastrin receptor-peptide epitope conjugated at its cysteine end to immunogenic carrier, useful for treating patient suffering from gastrin responsive tumor.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               inflammatory condition; eosinophil accumulation; immune response; autoantibody; eotaxin; interleukin; IL-5; IL-4; IL-9; IL-13; antitoflammatory; antiasthmatic; antiallergic; vaccine; asthma; allergy; allergic disease; human; spacer peptide.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Treating inflammatory conditions resulting from eosinophil accumulation
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Gaps

                                                                                                                                                  This invention relates to a novel method of treating a subject for an inflammatory condition which results from eosinophil accumulation which comprises generating an active immune response in the patient comprising autoantibodies to eotaxin and interleukin (IL)-5 (or IL-4, IL-9 and IL-13). The invention may be useful for the development of compounds with an antinfilammatory, antiasthmatic or antiallergic activity or for the production of a vaccine. The composition and methods are useful for preventing or treating inflammatory conditions resulting from eosinophil accumulation, such as asthma, allergy or allergic diseases. The present sequence is that of a peptide, derived from human eotaxin linked to a spacer peptide, which may be used within the method of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Treating inflammatory conditions resulting from eosinophil accumulation (e.g. asthma, allergy or allergic disease) comprises generating an active immune response against eotaxin and interleukin-5.
(e.g. aethma, allergy or allergic disease) comprises generating an active
1mmune response against ectaxin and interleukin-5.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         inflammatory condition; eosinophil accumulation; immune response; aucoantibody; eotaxin; interleukin; IL-5; IL-4; IL-9; IL-13; antialtammatory; antiatesthematic; antiallergic; vaccine; asthma; allergy; allergic disease; human; spacer peptide.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ADS18219
```

ò 셤 This invention relates to a novel method of treating a subject for an inflammatory condition which results from eosinophil accumulation which comprises generating an active immune response in the patient comprising autoantibodies to eotaxin and interleukin $({\rm IL})$ -5 (or ${\rm IL}$ -9 and ${\rm IL}$ -13). The invention may be useful for the development of compounds with an antiinflammatory, antiasthmatic or antiallergic activity or for the

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        invention has cytostatic, vasotropic, haemostatic, cardiovascular, gastrointestinal, immunomodulator, inotropic, cerebroprotective, nephrotropic, antihifilamatory, antibacterial, virucide, gastrointestinal, immunomodulator, inotropic, cerebroprotective, proprietoropic, antihifilamatory, antibacterial, virucide, gynaecological, and antidiabetic activity. A polymucleotide of the invention may have a use in gene therapy, and as a vaccine. The methods and compositions of the invention are useful for diagnosing, preventing, treating and/or ameliorating diseases unch as cancer (neural, preventing, reproductive, gastrointestinal, endocrine, renal, CNS and respiratory neoplasias), blood disorders, immune disorders, infections, infitammatory disorders and type II diabetes. They can also be used in chromosome identification, screening assays and molecular weight markers. The present sequence is used in the exemplification of the invention.
              preventing or treating inflammatory conditions resulting from eosinophil accumulation, such as asthma, allergy or allergic diseases. The present sequence is that of a peptide, derived from human eotaxin linked to a spacer peptide, which may be used within the method of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The invention relates to a novel isolated polypeptide. A protein of the

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The invention relates to a novel isolated polypeptide. A protein of the invention has cytostatic, vasotropic, haemostatic, cardiovascular, gastrointestinal, immunomodulator, inotropic, cerebroprotective, neutroined, and intidiamatory, antibacterial, virucide, gynaecological, and antidiabetic activity. A polynucleotide of the invention may have a use in gene therapy, and as a vaccine. The methods and compositions of the invention are useful for diagnosing, preventing, treating and/or ameliorating diseases such as cancer (neural, reproductive, gastrointestinal, endocrine, renal, CNS and respiratory neoplasias), blood disorders, immune disorders, infections, inflammatory disorders and type II diabetes. They can also be used in chromosome identification, screening assays and molecular weight markers. The present sequence is used in the exemplification of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               New isolated polypeptide and encoding polynucleotide useful for diagnosing, preventing, treating and/or ameliorating diseases such as cancer, blood disorders, infections, inflammatory and immune disorders

The invention describes a transgenic plant comprising a recombinant polymuclectide of any one of more than $10 muclectide sequences fully defined in the specification or its complement. The method of the invention can be used to produced a plant having altered traits such as: enhanced tolerance to abiotic stress; glyphosphate tolerance; hormone sensitivity; disease resistence; sugar sensing; early or late flowering; altered flower structure, change in stem bifurcations, altered branching pattern, reduced apical dominance, reduced trichome density; lack of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         New transgenic plant comprising a recombinant polynucleotide of any one of more than 500 nucleotide sequences, useful in bioinformatic search methods.

            development; Increase in trichome number; altered stems morphology; altered seed development; altered seed development; altered cell proliferation or cell differentiation; rapid development; premature sensecance; increased necrosis; increase in seedling or plant size; decreased plant size; leaf morphology; seed suthocyanins; increase in plant transgenic plant, polymucleotides and polypeptides are useful in bioinformatic search methods. This is the amino acid sequence of a plant transcription factor; and an orthologue of Arabiodopsis thaliana transcription factors isolated in the invention, that can be used in the creation of a transgenic plant with altered traits.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              useful
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          This invention relates to a novel plant transcription factor polypeptides, the DNA sequences which encode them and their use in creating transgenic plants. The transgenic plant and methods are useful for producing commercially or agriculturally useful plants having improved tolerance to drought, shade and low nitrogen conditions when compared to wild-type reference plants. The present sequence is that of plant transcription factor protein which was used during the development of the transgenic plants of the invention.

The transgenic plant and methods are useful for producing commercially or agriculturally useful plants having improved tolerance to drought, shade and low nitrogen conditions when compared to wild-type reference plants. The present sequence is that of a plant transcription factor protein which was used during the development of the transgenic plants of the invention.
                                                                                                                                                                                                                                                                                                                          transcription factor; transgenic plant; agriculture; drought resistance;

Sequence 13, Application US/10372917

Publication No. US20040209799A1

GENERAL INFORMATION:

ATTLE OF INVERTION: JAK/STAT PATHWAY INHIBITORS AND THE USES THEREOF

TITLE OF INVERTION NUMBER: US/10/372,917

CURRENT FILING DATE: 2000-01-24

NUMBER OF SEQ 1D NOS: 13

SOFTWARE: Patentin Ver. 3.2

SEQ 1D NO 13

LENGTH: 17
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Gaps

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
